Website Availability Evidence Report

Period: 25-Oct-2026 13:28:41 IST to 26-Oct-2026 13:28:41 IST (all times IST, UTC+5:30)

Monitoring data available for: 1m

Method

Checks run from an independent monitor on Oracle Cloud (not on the hosting provider's network). Every 5m an HTTPS GET request is sent to each URL with a 20s timeout; HTTP 200-399 counts as UP. A failed check is retried 2 times, 20s apart. If all retries fail the site is declared DOWN and rechecked every 2m until it answers; the downtime is measured from the first failure to the first success. Short failures that recover during the retries are still listed below as failed checks.

https://projectsaas.in

Server address (DNS now): 45.199.139.25

Availability: 100.000% Confirmed downtime: 0s Confirmed outages: 0

Checks: 0 Failed checks: 0 (0.0%) Response time: avg 0 ms, 95th pct 0 ms, max 0 ms

https://imprest.projectsaas.in

Server address (DNS now): 45.199.139.25

Availability: 100.000% Confirmed downtime: 0s Confirmed outages: 0

Checks: 0 Failed checks: 0 (0.0%) Response time: avg 0 ms, 95th pct 0 ms, max 0 ms

Total failed checks across all sites: 0. Raw data: CSV export of every check.
