Website Availability Evidence Report

Period: 18-Oct-2026 13:28:30 IST to 19-Oct-2026 13:28:30 IST (all times IST, UTC+5:30)

Monitoring data available for: 14h 27m 54s

Method

Checks run from an independent monitor on Oracle Cloud (not on the hosting provider's network). Every 5m an HTTPS GET request is sent to each URL with a 20s timeout; HTTP 200-399 counts as UP. A failed check is retried 2 times, 20s apart. If all retries fail the site is declared DOWN and rechecked every 2m until it answers; the downtime is measured from the first failure to the first success. Short failures that recover during the retries are still listed below as failed checks.

https://projectsaas.in

Server address (DNS now): 45.199.139.25

Availability: 100.000% Confirmed downtime: 0s Confirmed outages: 0

Checks: 1 Failed checks: 0 (0.0%) Response time: avg 5006 ms, 95th pct 5006 ms, max 5006 ms

https://imprest.projectsaas.in

Server address (DNS now): 45.199.139.25

Availability: 100.000% Confirmed downtime: 0s Confirmed outages: 0

Checks: 1 Failed checks: 0 (0.0%) Response time: avg 6431 ms, 95th pct 6431 ms, max 6431 ms

Total failed checks across all sites: 0. Raw data: CSV export of every check.
